**AUDIT TYPE:**

Announced Audit

**AUDIT EXECUTIVE SUMMARY:**

This inspection and the total time spent included 6 farms (growing areas), one harvesting crew, and one processing facility. The Farming/ Harvesting evaluation included the review of the growing/ harvesting activities involved in the production of conventional fresh radishes, which includes the evaluation of the growing areas, the ground history & adjacent land use, the handling of chemicals -both for nutritional and pest control-, the quality of the water used for fertigation, irrigation, pesticides application and hand washing, the hygiene of the field workers and sanitary facilities. This Farm has approximately 80 Acres for the production of the radishes, in one single block: Twin Pivots. The growing area this season was done as dryland farming. There is the Orangeville creek crossing the south sector of this farm that is the back up for irrigation and using the pivot overhead irrigation system when needed. There was observed some disking activities for the next plantings. The adjacent land for farming is used on a 4 to 5 year rotation between corn -4 seasons- and radishes -one season-. The whole growing area is surrounded by agriculture land in a rotation between 4 years with corn and 1 year with radishes, along woods area, the Gun river, the Orangeville creek and main paved roads. Season runs usually from May to October.

**Addendum(s) included in the audit:**

Not Applicable

**Product information for each product**

Product Group/Product Name	Observed Product	Seasonality	Country of destination for product
Radishes	Observed on the day of audit	From: May To: October	Canada, United States
